

Information Technology Intern Program

David F., Program Graduate: The internship program is a fantastic way to develop talent for the company. It is essentially a preview of what it would be like to be a full-time employee.

Zack Z., Program Graduate: I found the intern-mentoring program to be very valuable as my mentor was able to provide me with a lot of guidance and suggestions on how to handle different ideas.

Alex M., Program Graduate: My mentor acts as a teacher and a friend, introducing me to the working culture and professional life.

David: The mentoring program provides valuable insight and experience from people who have been there.

Daniela S., Program Graduate: The program is really important to us because we want to use it to build a solid foundation in the intern's career and as a platform in their career long-term.

David: And It gives you the opportunity to make connections you wouldn't be able to make otherwise.

Zack: I think the best thing about the internship experiences is the opportunity to learn about different parts of the company even though you're only working in one individual part. It really opens up my perspective to see all the different areas and explore different avenues that I might be able to go into in the future.

Alex: There's a big emphasis on teamwork and diversity. Every week, as an intern, I'm able to meet different leaders from all parts of the company.

Daniela: The IT Learning and Development Team has a great curriculum to choose from and all the interns are very much encouraged to take advantage of it.

Zack: BNY Mellon offers a lot of opportunities with training, whether it be for a particular project that you're working on or a long-term goal, there's always something available for you to take and grow your skill set.

Alex: Both my manager and my mentor give me goals to achieve. This allows me to go about solving problems in my own way.

David: I've been able to come up with creative solutions to meet user needs and PPN. I get to design new enhancements and develop training materials as well as write communications for all 13,000 employees in client-technology solutions.

Daniela: This is a very well structured company, but when a challenge arises and I get the opportunity to be part of the solution, I'm very much encouraged to use my creative problem-solving skills to mitigate the situation as quickly as possible.

Alex: There is a huge focus on technology at BNY Mellon. We support the financial groups which support the business.

Daniela: At the end of the day, you're not only part of a global leader with many facets in technology, but you're also part of an organization that delivers real value with the utmost integrity.

Zack: I would definitely recommend the internship program to a friend. I had a great experience interning for BNY Mellon. It has provided me a great opportunity to start my career here with a company that is concerned about my success and growth.

Alex: Technology at BNY Mellon means

Zack: delivering excellence,

Daniela: innovative technologies,

David: and collaboration.
