

Technology Application Development Program

Karandeep K., Program Graduate: I'm an App Dev Trainee, and I'm learning a lot of new things. I recently became Cloud Certified, and I'm being exposed to all the new technologies. This program is exactly what I was looking for right after college, and so far, it has met all of my expectations.

Vince C., Program Graduate: I was originally drawn to this posting due to the fact that I would go through a deeper developmental process than most jobs.

Dave M., Program Graduate: The application development training period is really an awesome opportunity to come into the company and learn about our custom softwares, learn about our lines of business, and get a chance to network with people throughout the company.

Karandeep: During our first week of training, not only did we get to meet the CIOs and department heads, but they also gave us their contact information and told us to reach out to them in case we have any questions.

Vince: During my training, I have been using various technologies, such as Java, Oracle, and Linux. These are all technologies that I'll be using in my position, working with the Enterprise Payment Hub. I love the fact that I have a chance to work with such valuable technologies and that we have such great networking opportunities.

Karandeep: A large portion of BNY Mellon is focused on IT Spectrum, and programs like this show that BNY Mellon prioritizes on recruiting top talent and training them to succeed in the industry. I believe the training program is beneficial to the company because it provides new employees the opportunity of on-the-job training and education through a class setting.

Dave: This has been a huge opportunity for me to work for a major financial company—be exposed to many different kinds of technologies and have many opportunities.

Karandeep: I'm proud to be part of an organization where people from different expertise work together. Everybody here is very approachable and helpful so if you ever need anything, you have the resources.

Vince: The training is great. It provides you with a group of peers which become your go-to network and the fact that you can bounce ideas off of them.

Dave: I've seen the company is really focused now on attracting the best talent, streamlining our processes, looking at all of our technologies, and finding the best solutions.

Karandeep: Creativity is encouraged at BNY Mellon. We are motivated to come up with new ideas, and we are rewarded for that.

Dave: The culture here — it's very hard-working, but at the same time, it's fun as well. There's a lot of work to do, and I'm always impressed at how our teams, you know, pitch in and work together to get the work done.

Vince: I like the fact that my co-workers are excited about their work and are willing to help you succeed in your role. I would definitely recommend this program to anyone because it gives you a chance to expand your education and better prepares you for a career in IT.

Dave: I would absolutely recommend this program. I think it gives you a great opportunity to come into the company, learn about our technology, and gain a lot of hands-on knowledge.

Karandeep: I would certainly recommend this program to a friend. It is a great opportunity to start your career as an application developer and a great place to stay. Technology at BNY Mellon means delivering excellence,

Vince: innovative technologies,

Dave: collaboration.
