BNY Mellon's Environmental Sustainability Policy Statement

BNY Mellon helps drive global growth and prosperity, improving lives through investing.

BNY Mellon strives for excellent operational management to reduce climate-related risks, improve efficiency, and deliver the highest service quality.

This policy, which applies to BNY Mellon’s global operations, includes:

- Managing our direct environmental impact through the continual maintenance and improvement of our Corporate Environmental Sustainability strategy
- Periodically reviewing and revising this Environmental Policy Statement to reflect changing conditions and information
- Fulfilling our compliance obligations, including applicable environmental laws and other requirements
- Committing to the protection of the environment, the prevention of pollution, and the continual improvement of our environmental performance
- Setting targets on our key environmental efforts and reviewing them periodically
- Publicly and transparently reporting on our environmental performance and reviewing our progress annually
Our Environmental Sustainability Commitments:

- Continue to globally measure, monitor and reduce our energy consumption and associated greenhouse gas emissions against a 2008 baseline at tracked properties under company control

- Incorporate sustainable design into new and retrofit construction projects, as well as operations and maintenance programs to improve efficiency and environmental performance at our offices

- Monitor, measure, and reduce our water consumption through improved water efficiency at properties under company control

- Increase quantities of waste diverted from landfill, through increased recycling and alternative waste management solutions

- Track and decrease our global paper and toner consumption through technology efficiencies, and divert electronic waste from landfill

- Develop an employee engagement program to raise awareness of environmental issues and promote responsible behavior
