The evolution of China’s credit market in the past fifteen years has been truly game changing, akin to unlocking the markets with a series of measured steps which will ultimately result in greater capital inflows. The direct CIBM scheme is China’s Gordian Knot moment.

Mathew Kathayanat

BNY Mellon

Earlier last year, China’s Central Bank, the People’s Bank of China (PBOC), introduced the direct route for foreign investors to access the China Interbank Bond Market (CIBM). CIBM accounts for over 90% of the onshore bond market in China (See Figure 1) and this provides foreign investors access to the third largest bond market in the world after the United States and Japan. (See Figure 2)
The Lure of China’s Bond Market

The onshore bond market is predominantly made up of the CIBM and the exchange bond market. The CIBM is the over-the counter (OTC) market and is regulated by the PBOC. The exchange bond market refers to bonds listed and traded on the two main stock exchanges, the Shanghai and Shenzhen Stock Exchanges. Figure 3 below illustrates the China bond market structure.

Figure 3: China Onshore Bond Market Structure

Government bonds and policy bank bonds which are issued in CIBM represent 89% of CIBM distribution volume. Corporate bonds with 4% CIBM distribution volume is a rapidly growing market in recent years (See Figure 4). As of January 2017, policy bank bonds constitute over 30% of the total trading volume in the China interbank market, followed by certificate of deposit (See Figure 5).

The size and dynamics of CIBM offer opportunities for global investors to diversify their investment portfolios. “It is a market very much sought after by fund managers who are interested to increase their China allocation by accessing onshore RMB fixed income securities and at the same time benefit from the relatively higher yield which they are producing,” says Stéphane Karolczuk, Partner and Head of the Hong Kong office at Arendt & Medernach.*

* Please note that current or past performance of any investment is not indicative, nor a guarantee, of future results.
The foreign ownership in CIBM is small, representing less than 2% of the outstanding value (See Figure 8). One of the key reasons is due to the restricted access for foreign investors.

In 2010, the PBOC started to allow foreign institutional investors namely foreign central banks, RMB clearing and settlement banks, and sovereign wealth funds to invest in CIBM. In 2011, CIBM was further made available to Qualified Foreign Institutional Investors (QFII) and subsequently Renminbi Qualified Foreign Institutional Investors (RQFII) in 2013.

In February 2016, the Chinese government, in an effort to liberalize the capital market, further widened the scope of foreign investors to all foreign institutional investors including commercial banks, insurance companies, asset managers, pension funds and broker-dealers, to CIBM via the direct access route.
ON MARCH 1, 2017, BLOOMBERG LAUNCHED 2 NEW HYBRID BOND INDICES THAT INCLUDE CHINA ONSHORE BONDS. THIS IS IN ADDITION TO THE GLOBAL INDICES UNDER THE BLOOMBERG BARCLAYS BENCHMARK BOND INDEX.

OVER 50% RATED AAA BY DAGONG GLOBAL CREDIT RATING CO., LTD.*

“This new direct route to the China interbank bonds market provides fund managers new opportunities, in particular, the ability to access onshore RMB fixed income securities in a manner which, practically, is much more flexible than the existing QFII and RQFII quota systems.” Stéphane Karolczuk says. Figure 9 illustrates the different types of foreign investors registered with the PBOC since the inauguration of CIBM direct route. The direct access route simplifies and expedites the entry process which entails only registration with the PBOC. There is no individual and aggregate investment limits. In addition, there is no foreign exchange restriction such as lock-up and repatriation.

The expansion of onshore bond market has gained foreign regulatory support. “Indeed, Luxembourg Undertakings for Collective Investment in Transferable Securities (UCITS) funds have over the years been authorized to take advantage of the various China access channels introduced by the Chinese authorities. UCITS may access this market through QFII, RQFII, Stock Connect, CIBM direct, and perhaps tomorrow the Bond Connect”, says Stéphane Karolczuk. The Commission de Surveillance du Secteur Financier (CSSF) has now allowed UCITS managers to have direct access to CIBM.*

Potential Opportunities

In August 2016, PBOC had approved the World Bank to issue Special Drawing Rights (SDR) denominated bond in the CIBM with a total size equivalent to USD 2.8 billion. This marked another step by the Chinese government to internationalize the capital market.

The recent announcements have brought the China bond market closer to inclusion in global indices. China and Hong Kong are also currently discussing “Bond Connect”, following the successful launch of the Stock Connect. This initiative would make Chinese bonds more accessible to international investors.

“The direct access route can prove relatively easy and quick as it requires registration only with the PBOC”, says Magdalene Tay, BNY Mellon. (See Figure 11)

| Investment Scope | - Listed securities  
- CIBM  
- Securities investment funds  
- Index futures | CIBM |
| Approximate Access Timeframe (if all documents are in order, and subject to variation) | Several months (depending on case by case) | 3 - 4 weeks |
| Injection and Lock-Up Period | Yes | No |
| Repatriation Restriction | No, except QFIs (subject to monthly limit) | No |

In the registration form, the applicant has to indicate the anticipated investment size in CIBM. Additionally, the international investor has to inject 50% of the anticipated investment size registered with PBOC within 9 months from the date on which the registration is completed. Otherwise, the international investor has to re-file the anticipated investment size with PBOC.

With the anticipated inclusion of China’s bonds in the global indices, BNY Mellon Asset Servicing APAC estimates foreign investment in CIBM may reach as high as 7% by 2020.
We are BNY Mellon

BNY Mellon is a global investments company dedicated to helping its clients manage and service their financial assets throughout the investment lifecycle. Whether providing financial services for institutions, corporations or individual investors, BNY Mellon delivers informed investment management and investment services in 35 countries and more than 100 markets. As of 31 March 2017, BNY Mellon had US$30.6 trillion in assets under custody and/or administration, and US$1.7 trillion in assets under management. BNY Mellon can act as a single point of contact for clients looking to create, trade, hold, manage, service, distribute or restructure investments. BNY Mellon is the corporate brand of The Bank of New York Mellon Corporation (NYSE: BK).
